

1 **Enfield Conservation Commission – Meeting Minutes**  
2 **DEPARTMENT OF PUBLIC WORKS/MICROSOFT**  
3 **TEAMS PLATFORM**  
4 **March 7, 2024**

5  
6 **CONSERVATION COMMISSION MEMBERS PRESENT:** Leigh Davis (via Teams),  
7 Shirley Green (Chair), Jean Hinshaw (via Teams), Edward Rippe (Vice-Chair), Kate Plumley  
8 Stewart (Selectboard Representative), Carol Wyman, John Welenc

9  
10 **CONSERVATION COMMISSION MEMBERS ABSENT:**

11  
12 **STAFF PRESENT:** Rob Taylor, Land Use and Community Development Administrator,  
13 Whitney Banker-Recording Secretary

14  
15 **GUESTS:** Jerrold Theis, Liz Kelly (Resilience), Crystal Kidd (Resilience)

16  
17 **CALL MEETING TO ORDER**

18 Chair Green called the meeting to order at 7:00 pm and took attendance.

19  
20 **PUBLIC COMMENTS**

21 None.

22  
23 **APPROVE MEETING MINUTES: January 4, 2024**

24 Mr. Welenc moved to approve the January 4, 2024, minutes as amended. Mr. Rippe seconded.  
25 Vote in favor of the motion with one abstention (4-0-1).

26  
27 Amendments:

28 Line 17 – Theis to Green

29  
30 Ms. Hinshaw arrived at the meeting via Teams.

31  
32 **MASTER PLAN DISCUSSIONS: Resilience Planning and Design (contractor)**

33 Mr. Taylor provided an overview of the history of Enfield’s Master Plan and the current plan and  
34 development phase II.

35  
36 Ms. Davis arrived at the meeting via Teams.

37  
38 The five chapters of phase II are recreation, heritage/preservation, energy/sustainability,  
39 conservation, and municipal facilities and services.

40

*Enfield Conservation Commission Minutes, March 7, 2024*

41 Mr. Taylor introduced the planning consultant representatives, Ms. Kelly and Ms. Kidd.  
42 Ms. Kelly provided a brief overview of tonight's meeting goals and the discussion questions they  
43 had prepared beforehand.

44

45 **Notable open spaces and undeveloped land in Enfield:**

46 Mr. Welenc said the water bodies in town come to mind for him. The lakes, rivers, and other  
47 water bodies. Clean water is vital.

48

49 Ms. Wyman shared that discussions in town are intensifying on housing and development in the  
50 downtown area. She said that she felt creating green spaces before much development takes  
51 place is a priority. Lakeside Park is an example of a recently developed green space in this area  
52 that has been very popular for recreation and teaching.

53

54 Mr. Rippe echoed that the lakes and rivers are a high priority and that there are many concerns  
55 about water quality and runoff.

56

57 Ms. Davis said that wetlands, especially George Pond along Bog Road. She feels wetland  
58 encroachment has been an ongoing issue, and the wetland setback voted in at last year's town  
59 meeting was a good step. She highlighted protecting wetlands in the face of loosening policies at  
60 the state level and the importance of keeping wetlands safe at the local level.

61

62 Ms. Green agreed that keeping wetlands and working together with those in town and the state.

63

64 Ms. Hinshaw said that she is a newer resident of Enfield and agrees that keeping water quality is  
65 highly important. She also stated that wildlife is a high priority, and the town should consider  
66 them alongside the changes that occur with housing, roadways, traffic, etc.

67

68 Ms. Stewart agreed that the water and lakes in town tend to be a very popular recreation area.  
69 She also stated that the mountains surrounding the town and the runoff that can occur are  
70 important to consider. Ms. Stewart also highlighted the conserved lands in town and their critical  
71 roles in recreation, wildlife, and preservation.

72

73 **Existing conserved lands as viewed by the conservation commission:**

74 Ms. Kelly asked for a brief overview of the town's conserved lands and how they are managed.

75

76 Mr. Theis asked if the consultants had a copy of the commission's Natural Resources Inventory.  
77 They confirmed they have copies and have been using them as a resource. Mr. Welenc expanded  
78 to explain that this document provides a good rundown of the conserved lands.

79

80 **Town's biggest land and water protection accomplishments and items to work on in the**  
81 **last ten years:**

82 Ms. Stewart said that looking at the minutes for the town reports would also be a helpful  
83 resource for accomplishments.

84

85 Ms. Wyman said two accomplishments that stand out to her are the milfoil project (which has  
86 been very successful) and the lake host program (run by the NH Lakes Association since 2002).

87 Ms. Green expanded to explain the lake host program, which trains individuals and stations them  
88 at boat launches to check boats in/out to check for invasive species and provide educational  
89 pamphlets.

90

91 Ms. Davis said that Mr. Welenc's educational program, which was recently launched in the  
92 schools, has been a great success. She also stated that having public informational sessions, often  
93 held at the Enfield Shaker Museum, has been an accomplishment. Former commission chair, Mr.  
94 Theis, has kept the commission up to speed with changes at the NH Department of  
95 Environmental Services (DES).

96

97 Ms. Green said that having an Enfield trails master was another recent project that has been very  
98 successful for the town.

99

100 Ms. Stewart stated that Enfield has been a Tree City each year, which helps showcase the  
101 importance of conservation within the town. There have also been invasive species workshops  
102 that teach how to identify and remove invasives both along and away from water. Ms. Green  
103 echoed that for a long time, invasive species within the lakes were a large focus, and now  
104 focusing on the land invasives is also important.

105

106 Ms. Stewart highlighted the Soak Up the Rain NH efforts that the commission has worked on  
107 and the positive community outreach and education that has taken place.

108

109 Ms. Stewart also shared updates that the Department of Public Works (DPW) has done,  
110 including improvements to ditching in town.

111

112 Ms. Stewart highlighted that Enfield's Health Officer has been very involved in keeping up with  
113 problems that include cyanobacteria, working closely with the lake associations, and addressing  
114 septic system failure or inadequacy issues.

115

116 Mr. Taylor added the expansion of the town's municipal sewer system, including the large  
117 development of Lakeview on Route 4A. The town worked with the Homeowner's Association  
118 on this. Many homes in this area between the prior end of the system and this expansion have  
119 private systems but could connect at some point. Ms. Stewart added ideas to investigate ways to  
120 make hooking up to the system more affordable as septic systems age.

121

122 Mr. Taylor shared the acquisition of lands previously owned by the railroad, now known as  
123 Lakeside Park, along the lake. The town plans to model good lake stewardship, remediate  
124 invasives, provide educational opportunities, etc. Ms. Green added that the goal of this park is to  
125 be a lake-friendly example. Mr. Taylor added that this preserves public access to the water,  
126 where much of that land is privately owned.

127  
128 Ms. Davis added that the DPW sent in a representative regarding the most environmentally  
129 friendly way to salt the roads and listened to feedback given by the commission to improve this.  
130 Ms. Green suggested that low-salt areas along the lakes might also be helpful to establish in the  
131 future. Mr. Taylor added that a dust control program for the roads also helps minimize runoff  
132 and material movement.

133  
134 For what still needs to be done, Mr. Taylor said that he felt implementing a regulation for  
135 waterfront protection that requires maintenance of septic systems along waterfront areas would  
136 be a significant improvement for the lakes. Members agreed that this would be a significant  
137 improvement.

138  
139 Mr. Taylor also shared that dog waste has become a large problem, particularly for runoff to the  
140 lakes (as well as in other recreational open spaces throughout town). Ms. Stewart suggested  
141 handing out the composting pick-up bags to help address this. This would help the commission  
142 hold community members accountable. Ms. Wyman also agreed education campaigns would be  
143 useful around this issue.

144  
145 Ms. Stewart said that the rain garden education and tools are a high priority for improvements,  
146 including what incentives could be implemented to have a positive impact here. This will also  
147 beautify the town.

148  
149 Ms. Stewart said that the storm drains and education around that they go to the lake versus not  
150 the municipal sewer system and not to put waste materials in them. She suggested painting that  
151 could be done to explain this on the drains themselves and provide education.

152  
153 Mr. Taylor added the fertilizer issue and restrictions around using them, especially near water  
154 bodies. Ms. Stewart suggested education about available pumps that can help those who want to  
155 utilize lake water as fertilizer. Ms. Stewart also said that another issue is mowing down to the  
156 lake, which encourages geese and erosion. She suggested education around this at the farmer's  
157 markets.

158  
159 **Future priorities:**

160 Ms. Wyman stated that cyanobacteria has become an increasing issue that needs to be addressed  
161 as a priority. Five warnings were issued last summer regarding cyanobacteria outbreaks.

162

163 Ms. Green stated that individual community members take stormwater runoff measures, and  
164 education about this is important. Ms. Stewart added that incentivizing community members to  
165 take these measures is a key priority.

166

167 Mr. Welenc stated that the fertilizer issue and potential buffer zones or bans near the lakes were  
168 priorities. Ms. Stewart agreed and suggested a campaign from the commission regarding  
169 fertilizing with lake water. Mr. Rippe added the importance of replacing lawns with native  
170 species. Ms. Stewart suggested giving away free seeds as part of education. Ms. Davis suggested  
171 a contest for “ugliest lawn.” Ms. Stewart suggested, “frugal, not fancy.” Ms. Green added the  
172 NH Lake Smart program, which the town could participate in.

173

174 **Recreation:**

175 Ms. Kelly asked for any further thoughts regarding outdoor recreation. Ms. Stewart suggested  
176 including Craig Sanborn, the town’s Trail Master, in conversations about this. She also  
177 suggested education about avoiding recreation during mud seasons.

178

179 Ms. Green invited Mr. Theis to participate in the discussion as a longtime member of the  
180 commission.

181

182 Mr. Theis said that understanding the carrying capacity of a community is essential. This  
183 includes providing resources to support existing populations (humans and wildlife). Quality of  
184 air, shelter, food, and water are vital. Keeping the carrying capacity in mind should be critical for  
185 the town. Mr. Theis stated that the recent drilling of additional wells for the municipal water  
186 system and pipe upgrades need to be considered. He also indicated trash production as another  
187 issue, including trucking impacts outside of town. Mr. Theis said that he felt educating  
188 community members on the welfare of both people and wildlife, as well as the town’s ecosystem  
189 and value, is very important as part of the master plan. He suggested thinking 25-50+ years from  
190 now and what the community could look like based on what priorities are held by community  
191 members.

192

193 Mr. Welenc agreed that understanding the consequences of bad land ethics is vital for the  
194 community.

195

196 Ms. Stewart also highlighted the area's housing crisis and the importance of providing housing in  
197 areas like downtown (which goes hand-in-hand with the housing importance of the first phase of  
198 the master plan), as well as infrastructure for less driving, more walking, and access to  
199 transportation and services. She agreed that the town needs to be more cautious with  
200 development around the lakes and the necessary guardrails that zoning can provide to avoid  
201 development in areas far away from infrastructure and services. Ms. Green agreed that  
202 development in central areas of town would provide housing and help conserve lands further  
203 away from services.

204

205 Ms. Stewart also highlighted discussions around zoning regarding housing units per lot and  
206 accessory dwelling units (ADUs) as ways the community has been creative about housing access  
207 and continues to work on it.

208

209 Ms. Davis asked if there is a limit on the amount of water available for public use and if there is  
210 a limit on the amount of sewer that can be pumped to Lebanon. Ms. Stewart replied that yes,  
211 there are limits. For water, there are several limitations, such as quality and speed. There is a  
212 contract for sewers with exactly how many gallons can be shipped. Currently, only about 1/3 of  
213 that limit is utilized. Mr. Theis commented about concerns regarding large municipal water  
214 system users, such as the two car washes recently added to the town and their long-term impact  
215 on the wells. Mr. Taylor confirmed that both utilize reverse osmosis to recycle water. Ms.  
216 Stewart also added the impact of at-home washes, including chemical runoff, and the fact that  
217 the car wash's effect on the system is minimal. Ms. Green said that it is essential to know where  
218 aquifers are and protect them.

219

220 Ms. Hinshaw said that it seems that, ideally, a conservation plan goes hand-in-hand with the  
221 master plan that looks at all aspects of the town, takes a longer view of the future resource needs,  
222 and fosters a reasonable quality of life. She said the actions being taken need to fit together as  
223 one system. She suggested a 25-year look at the water systems, weather projections, etc., and  
224 how to work backward to what the commission can do now to build a culture where conservation  
225 is a high priority throughout the community.

226

227 Mr. Theis added the importance of considering neighboring community impacts and Enfield's  
228 resources.

229

### 230 **Barriers to increasing land conservation and natural resource protection in town:**

231 Ms. Kelly stated that lack of education has been a theme throughout tonight's discussions. She  
232 asked for further comments.

233

234 Ms. Davis stressed the importance of collaborating with the Zoning Board of Adjustment (ZBA)  
235 and Planning Board (PB) to align conservation priorities with these bodies involved in the town's  
236 land development. She felt that working together could strengthen the commission and these  
237 boards.

238

239 Mr. Welenc said that financial fear is often a barrier he sees to conservation (more development  
240 providing more tax revenue is often a higher priority).

241

242 Ms. Stewart said that dealing with the state of NH is a barrier she encounters, particularly on the  
243 Select Board (SB) side of things. It can take a long time to get permits, and many restrictions  
244 often impact the town's ability to make good community decisions. Mr. Theis agreed that this is

245 an ongoing issue and highlighted the importance of electing representatives prioritizing these  
246 issues (state and local elections).

247

248 Ms. Stewart also stated that the cost barriers to “do the right thing” come into play. She  
249 wondered about further education around septic system updates (for example) and the town's  
250 financial resources to help individuals apply. Mr. Theis added that testing for septic system  
251 contamination around the lake and the way these systems impact water quality is vital to  
252 consider (as discussed earlier). He stated that many formerly small, camp-type dwellings are  
253 being upgraded to large, year-round dwellings with a more significant impact on existing, older  
254 septic systems. Mr. Rippe asked if septic requirements have changed in the past 20 years since  
255 he purchased his home and had to have the septic system approved before he could finance it.  
256 Ms. Stewart noted that cash transfers of properties don't have a septic review requirement in the  
257 same way financed transfers do. Many recent cash transfers have occurred in the area,  
258 particularly around the lakes.

259

260 Any additional comments can be sent to Mr. Taylor, who will forward them to the contractors at  
261 Resilience.

262

263 Mr. Taylor shared the upcoming public input sessions for the master plan: May 9 and May 11,  
264 2024.

265

266 After the public events, community members can also share thoughts and comments  
267 electronically.

268

#### 269 **NEW BUSINESS:**

##### 270 **Health Officer:**

271 Ms. Stewart shared that the SB recently had their annual presentation from Health Officer Mr.  
272 Ehrenzweig, and she felt that his information about the lakes, cyanobacteria, etc., would be  
273 helpful for the commission. She asked if the commission would like to have Mr. Ehrenzweig  
274 come to a future meeting to discuss this. All members agreed this was a great idea.

275

##### 276 **Earth Day:**

277 Ms. Green asked members to consider ways to celebrate Earth Day on April 22 and forward  
278 ideas to her ahead of the April 4 meeting.

279

280 Mr. Welenc suggested cleanup as a priority, which often happens at this time.

281

282 Ms. Stewart suggested having ‘junior conservation member’ stickers to encourage family  
283 participation in clean-up days.

284

285

286 **OTHER BUSINESS**287 **Soak Up the Rain:**

288 Ms. Fried had asked if the commission could reschedule this with the University of New  
289 Hampshire (UNH) when there is less groundwater from snow melt. Members agreed that it  
290 would be good to reschedule. Ms. Stewart will notify Ms. Fried.

291

292 **Lake Dredging:**

293 Mr. Rippe said that following a previous conversation about the high amount of sediment in the  
294 lakes, he has put together some contacts that may be good to work with on this issue. Mr. Rippe  
295 and Ms. Wyman will partner on further research regarding this issue.

296

297 Ms. Stewart suggested also researching a soil scientist who can pull samples and provided some  
298 additional contacts to Ms. Wyman and Mr. Rippe.

299

300 **NEXT MEETING:** April 4, 2024

301

302 **ADJOURNMENT:**

303 Ms. Stewart moved to adjourn the meeting at 8:52 pm. Ms. Wyman seconded.

304

305 The meeting was adjourned at 8:52 pm.
